Compact Radiators

Creating a comfortable living space starts with reliable, efficient heating.

At Vaporo Solutions, we know how important warmth is to making your home feel just right. That's why we're proud to offer our range of compact radiators.

More than just a way to heat your home, our compact radiators are designed with practicality in mind. Their clean, simple design fits easily into any room, providing a smart solution for spaces of all sizes.

Choosing the right radiator for your space is essential. Our range includes multiple sizes so you can find the perfect match for a small bedroom, a large living area or a home office.

Say goodbye to bulky, outdated heating systems. Our compact radiators offer powerful performance without taking over the room.

Despite their slim profile, these radiators deliver fast, consistent warmth. There's no need to trade comfort for space – with Vaporo, you get both.

We understand that investing in a heating solution is a long-term decision. That's why our compact radiators are built to last, using quality materials and precision engineering.

With the added reassurance of Vaporo's 10-year warranty, you can count on our radiators to keep your home warm for years to come.

Technical Data

Compact

Testing & Operating Pressures

Each Vaporo Compact radiator is independently tested for performance and reliability. Units are pressure tested to 13 bar to ensure integrity and durability, exceeding the maximum operating pressure of 10 bar.

Designed and manufactured to meet the highest industry standards, the range delivers consistent, dependable performance under all typical operating conditions.

All models are suitable for use with both direct and indirect (open and closed) central heating systems.

W

Connections

Every radiator is supplied with 4 x ½" BSP connections as standard, allowing straightforward and flexible installation across a wide range of heating systems.

Paint Process

All Vaporo Compact radiators undergo a multi-stage surface preparation and finishing process to ensure superior corrosion resistance and long-term protection. Unless otherwise specified, all models are supplied in Traffic White (RAL 9016).

Water Treatment

To maintain system efficiency and radiator longevity, it is essential to follow the Code of Practice for the Treatment of Water in Domestic Hot Water Central Heating Systems. Proper system flushing and treatment at the time of installation are vital to prevent corrosion and ensure continued performance.

Warranty

All Vaporo Compact radiators are supplied with a 10-year manufacturer's warranty, providing assurance of quality, durability and long-term reliability.

Helpful Info BTU & Delta T

What Size Of Radiator Do I Need?

To ensure your home stays warm and comfortable, it's important to choose a radiator with a heat output that closely matches your room's needs. We recommend selecting a radiator within 10% of your calculated BTU (British Thermal Unit) requirement. If you're unsure, it's better to opt for a slightly larger radiator. An oversized radiator can always be turned down using valves, but a radiator that's too small won't provide sufficient warmth.

How Do I Choose The Right Radiator?

Radiator output is measured in BTUs, which take into account room size, ceiling height, window area, insulation, and other key factors. This measurement helps determine the level of heat needed to warm your room effectively. To find the right radiator for your space, use our BTU Calculator. By entering a few details about your room, you'll receive a tailored BTU requirement to help you choose a radiator that delivers the perfect balance of warmth and comfort.

How Do I Calculate The BTUs For My Room?

For the most accurate calculation, we recommend speaking to a qualified plumber or heating engineer. However, our BTU Calculator offers a quick guide. Just remember: the BTU result represents the total output needed for the room, so you may need more than one radiator or towel rail in larger spaces.

Delta T Conversion

What is Delta T?

Delta T, or ΔT , refers to the difference between the temperature of the water flowing through your central heating system and the ambient room temperature. For example, if the room temperature is 20°C and the average temperature of the water inside the radiator is 70°C, then the Delta T value is 50°C (70°C - 20°C = 50°C).

In the UK, Delta T 50°C is the standard measurement used for domestic gas boilers. This benchmark ensures consistency when comparing heat outputs of radiators and towel rails across different manufacturers and product ranges. It allows heating professionals, homeowners, and consumers to make informed and accurate comparisons when selecting heating solutions.

Delta T Correction Factors (Delta T50°)

A Delta T correction factor helps both end-users and heating professionals determine the actual heat output of a radiator or towel rail when operating at different Delta T values. The calculator above is specifically designed to provide accurate output figures based on an input at Delta T 50°. Alternatively, you can refer to the correction factors listed below, which are also based on the standard Delta T 50° benchmark.

Example: If a radiator or towel rail has a heat output of 1000 BTUs at ΔT (Delta T) = 50°, its output at a lower ΔT will decrease accordingly. For instance, at ΔT = 30°, the output would be 1000 x 0.51 (based on the correction factor), resulting in 510 BTUs. At ΔT = 40°, using a correction factor of 0.75, the output would be 1000 x 0.75, giving 750 BTUs.

Delta T	Correction Factors
75°	1.69
70°	1.54
65°	1.41
60°	1.28
55°	1.154
50°	1
45°	0.895
40°	0.767
35°	0.657
30°	0.543
25°	0.433
20°	0.328
15°	0.229
10°	0.12
5°	0.05
